

## **INFECTIOUS LARYNGOTRACHEITIS (ILT) BIOSECURITY ADVISORY Guelph-Eramosa Township**

**June 18, 2020**

Infectious Laryngotracheitis (ILT) has been diagnosed in a mixed poultry flock experiencing high broiler mortality in eastern part of Guelph-Eramosa township. This flock is registered with Chicken Farmers of Ontario Family Food Program. This is the 5th ILT case identified in this general region of the province since May 1.

A Biosecurity Advisory Area with a 10 km radius around the infected premises has been established. Please refer to the map for details on road boundaries with in which Area is located [LINK](#)

Please reinforce your biosecurity protocols including monitoring the movement of birds, people and equipment on to and off of your farm in the interest of flock health. ILT is a serious contagious disease caused by a respiratory virus primarily in laying hens and chickens. Signs to watch out for include increased mortality, noisy breathing, head-shaking, off feed, decreased egg production, inactivity, ruffled feathers and conjunctivitis. **Should you suspect any signs of health concerns in your flock, please contact your veterinarian as well as your Board.** For after hours, call 1-877-SOS-BYRD.

Please advise any visitors to your premises of your biosecurity protocols because of this situation and keep a logbook of movement in relation to your farm. Minimize visits to other poultry production sites, avoid exchanging equipment with other poultry production sites or ensure that it is washed and disinfected. Ensure all personnel in contact with birds wear clean boots, protective suits, head coverings and gloves/handwashing. Ensure adequate control of vermin and wild birds.

Small flock growers should avoid introducing disease to their flocks. New birds should be segregated and monitored for at least 30 days before entering your existing flock. Make sure that new birds come from reputable suppliers that have strict disease controls in place. Birds returning from shows or exhibits should also be segregated for at least two weeks.

Further biosecurity information for small flock growers is available at <http://www.inspection.gc.ca/animals/terrestrial-animals/diseases/bird-health-basics/eng/1323643634523/1323644740109>.

We anticipate this advisory to remain in place until late July. A stand down advisory will be issued at that time. Any updates will be provided posted on [www.fbcc.ca](http://www.fbcc.ca)
